Equipment for Progressive
Farming

Row Bed Hipper/Conditioner

New Product

KMC ROW BED HIPPER/CONDITIONER

Introducing the new KMC Row Bed Hipper/Conditioner. This multiuse tillage tool can be used to hip, rebuild and condition beds. When equipped with an optional air seeder attachment, it can even plant the bottoms with cover crop all in one pass.

When using the Phillips Rotary Harrow attachment rather than a chopper, you can finish your beds at high speeds, with no damaging chopper marks, thereby eliminating planter bounce, producing the smooth firm finish you want.

The adjustable leveling boards are equipped with "Rasp" bars to help create the perfect finish and extend their life for thousands of extra acres.

Key Benefits!!

Pulls Fast!!
Lower Maintenance!!
Low hp Requirements!!
Easy Wrenchless Adjustments
Able to Operate in Wetter Soil Conditions!!

Kelley Manufacturing Co.

Phillips Rotary Harrow

Chopper Blades

Vs.

- Blades can leave grooves in the soil for an uneven planting surface.
- Blades can leave residue in the bed for poor planting performance.
- **The Phillips Harrow Leaves a smooth planting surface with the residue turned to the side of the beds!!!**
