

Optional Lift Assist Wheels for carrying seed planter with Rip Strip.

KMC Row Markers are rugged & give dependable service!

KMC Row Markers are available in various sizes for all KMC tool bars.

Optional KMC Row Cleaner removes heavy residue from the row allowing row tillage components to run in clean soil. Unique parallel linkage design allows row cleaner to float and remove residue not soil. Adjustable width.

Please contact KMC or you nearest KMC dealer for more information!

RIP STRIP

GENERATION I

THE KMC RIP STRIP WAY . . . MAKES CONSERVATION TILLAGE FARMING PAY!

- The KMC Rip Strip is available in 2,4,6,8, & 12 Row Models.
- Leaves surface residue from previous crops in the row middles where it helps protect against soil loss from wind and water erosion.
- Prepare seedbeds for improved seed germination, crop stands, and higher yields.
- Saves fuel by eliminating trips through the field.

The KMC Rip Strip Has Many Options To Suit Your Specific Needs . . .

The KMC Rip Strip provides pre-plant seed bed preparation in a single pass. Whether pre-plant begins in wheat stubble, standing corn stalks, or slicing through a cover crop, the Rip Strip will provide a clean, level, ideally prepared seed bed. The Rip Strip is available in 2 to 12 row models using rugged KMC toolbar designs. The Rip Strip can either run as a stand-alone machine or in combination with a planter joined by various attachment packages. Many KMC accessories are available for added versatility. If you have field conditions that need special attention, you can depend on KMC!

Waffle Coulters (2) with Rubber Tire Press Wheels:

Minimum till and close the slot made by the shank.
