STRIP CONDITIONER

- **Use Strip Conditioner when additional seed bed preparation is necessary.**
- **Run Rip Strip early & follow with Strip Conditioner at planting time.**

*Use KMC Strip
Conditioner
for preparing
smooth seed
beds!*

Larry Selph of Georgetown, Alabama burns down his cover crop in February and follows with his KMC Rip Strip three weeks later. At planting time he runs the KMC Strip Conditioner 7 to 8 mph immediately ahead of his planter. The 3 spider gangs running at a high speed do an excellent job of breaking up tough clay soils. The roller following the spider gangs leaves a smooth firm seed bed.

Mr. Selph says he covers 100-125 acres per day with his Strip Conditioner for a total of 2100 acres at planting time. The KMC Strip Conditioner makes it possible for him to effectively use strip till methods of planting in the clay soil and allows him to spread the work load over a bigger window of time. The results are smooth, moist seed beds and good stands.
